who is.....

HERITAGE MILLWORK INC

Established in the Spring of 1997 in Ramsey, Minnesota, Heritage Millwork Inc (HMI) has been servicing the Upper Midwest Market as a distributor of mouldings, millwork, and doors, supplying more than 250 dealers in Minnesota, Wisconsin, South Dakota and Iowa.

Over the years, Heritage Millwork Inc has listened and responded to the changing trends. Originally stocking only a few interior door designs in two wood species to now over twenty-five door designs in nine species, along with unlimited special-order options. Our facility can accommodate volumes of inventory that can accommodate demanding project timelines. In addition to a wide selection of interior doors, HMI also offers over thirty moulding profiles in seven species including MDF, with special-order moulding profiles and a broad selection of stair parts. Exterior entry door inventories also continue to evolve and expand, including products that promote striking curb appeal and home security as well as product performance including rot resistant materials.

Most recently, in 2017 Heritage Millwork Inc opened Traditions Finishing Inc (TFI), a state of the art pre-finishing facility, filling a growing desire amongst dealers to have products arrive at the job site finished and ready for installation. Together, HMI and TFI offer finishing solutions on all product lines in a wide range of colors and finishes, including custom color solutions upon request.

Over the last 23 years HMI has evolved and adapted as market conditions, industry, and customer's needs have changed. The one thing that has remained constant is our commitment to customers, employees, and suppliers. Founded on strong family values, and still driven by those same principles, our dedicated team of professionals is committed to exceeding expectations by delivering quality products and service.

STAIR PART BASICS

Over the Post
with open tread

Post To Post
with kneewall

Post To Post
with open tread

In an **OVER THE POST** staircase design, the handrails run over the newel posts and the balusters are fitted into the handrailing. These types of staircases, require the use of fittings and volutes. A **POST TO POST** staircase design, is a system where the handrail is mounted between the newel posts. These are the most common of staircase designs, these systems can use box newel or standard smaller newels.
